Technological advancements in our increasingly complex world provide the scope and capacity for innovation and development while also introducing new and unfamiliar risks.

Against this backdrop of change the young general insurance actuary is afforded myriad opportunities to apply their unique skillset across a range of diverse areas.

Following the success of the inaugural GI Glimpse Seminar last year, the 2016 Seminar will focus on innovation in the insurance market, data analytics and emerging cyber risk,

providing another glimpse into the future for the actuaries of tomorrow.

The Seminar will be held at the Actuaries Institute on Wednesday 3 August 2016 from 12.00pm to 6.00.

Offering both practical insights into the future of the general insurance landscape and opportunities to meet, network and discuss the experiences and challenges of the present, GI Glimpse 2016 is a 'must attend' event for young general insurance actuaries.
